

IDSPay API Technical Documentation

Enterprise API Platform for Verification , Onboarding & Automation

Version 1.0 | Updated

Service Name :- RC Advance Verification Technical Document

Company Introduction

IDSPay provides enterprise -grade APIs enabling organizations to automate identity verification , digital onboarding , financial workflows and data intelligence services . Our platform supports fintech companies , banks , NBFCs , startups and enterprises seeking scalable API integrations .

Server Introduction :

Overview

:IDSPay's RC Verification API enables fast and accurate retrieval of real -time vehicle registration data in JSON format . Our API helps businesses validate RC details instantly using secure and reliable data sources . With seamless integration , IDSPay empowers digital platforms to automate vehicle verification effortlessly . Designed for fintech , lending , insurance , logistics , and KYC-driven industries . IDSPay ensures high success rates , lightning -fast responses , and 24 /7 API availability for smooth operations .'(Key BenefitsInstant RC details in structured JSON formatReduces fraud by validating genuine vehicle informationEasy integration with any software , app , or CRMHigh accuracy , fast response time & industry -grade reliabilitySupports automation for lending , insurance , logistics & onboarding

Key Benefits :

Description :

Obtain the vehicle details along with the owner details with the RC number . -
Insurance details - Fiancier details - Vehicle details - Owner details (address , name ,
Fathers Name)

Possible Error Codes

Error Code	HTTP Status	Description
UNKNOWN_ERROR	N/A	Verification Failed .

Basic Integration Information

API access requires a valid API key issued by IDSPay .
 All requests must be sent via HTTPS .
 Content -Type must be application /json .
 Use the UAT environment for testing before production .
 Integration support is available from the IDSPay technical team .
